DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-29, 36-50, 51-54 and 55-58, drawn to method and system for controlling an application using audible input over a voice channel, classified in class 704, subclass 275 and ^{searched} in class 701, subclass 210.
- II. Claims 30-33 and 34-35, drawn to method and system for locating a mobile unit selectively using telecommunications network and audible input, classified in class 701, subclass 213 and ^{searched} in class 455, subclass 456.1.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination, respectively.

3. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as

Art Unit: 2655

claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the receiving information in a telecommunications network does not have to be over a voice channel. Instead with invention II, the received information for locating a mobile unit can be selected using telecommunications network and audible input, which is not needed to obtain data in a mobile telecommunication network. If the result from whether an automated location determination system exists in a telecommunications network is positive, the location information is generated in the telecommunications network. However, if the result is negative, the user provides an audible input (as discussed in claim 30). The subcombination has separate utility such as obtaining data in a mobile telecommunications network and controlling an application using audible input over a voice channel.

4. Because these inventions are distinct for the reasons given above and the *classification is different as well as the* search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

5. A telephone call was made to the listed attorney/agent (Albert Smith) on June 28, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2655

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
